

## Set Management starts with Ready Wireless.

Manage mobile equipment sets and mobile sales and inventory operations with READY's Set Management Solution. Configure to tell yourself things like when something is sold or if equipment is left in the field and where it is.

### 'Set Management' As A New Product Category

Basic Asset Trackers can tell you where a fleet vehicle or container are located, but what if you want to monitor tools/ equipment or inventory? READY Set Management is a bridge between Basic Asset Tracking and Yard and Lot Management, telling you where things are relative to one another, in groups.

### Set Management Efficiencies and Savings

- Completely automate mobile inventory paperwork/ auditing
  - Watch a thing go from a depot to a truck to being sold
- Optimize deployment by knowing where each thing is now
- Reduce capital expense and waste from things left on job sites
  - Retrieve left equipment ASAP, avoid replacement costs
- Reduce theft-related replacement costs with loss insights

### Set Management Use Cases and Customers

- Mobile Contractors: alert you if you left equipment on-site
  - Air Compressors, Generators, Saws, Hand Tools
- Restoration: last known location of every rented blower fan
- Building/ Job Sites: alerts if things move or leave a job site
- Container Security: alerts for unauthorized cargo unloading

### View, Alert, and Report On Demand

READY Wireless's intuitive dashboard allows you to **check real-time status of any asset or set**. Alerting **tells you when action is needed** without sitting someone behind a screen, and you can **export all your data and API insights to in-house software**.
